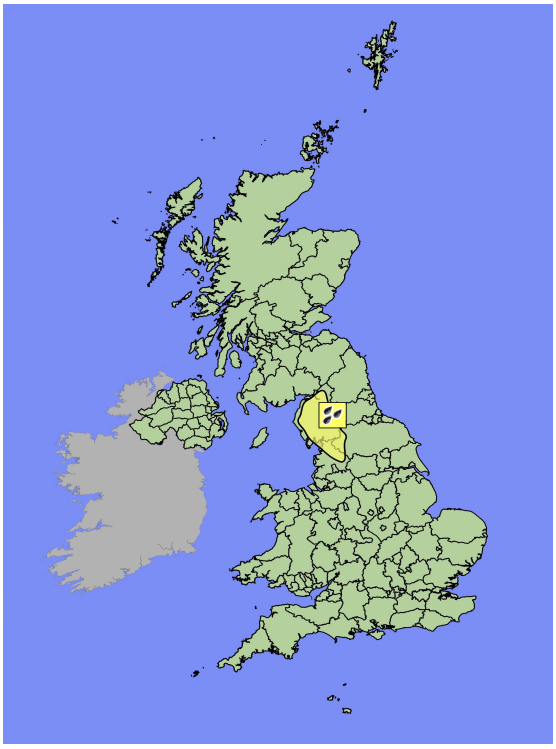
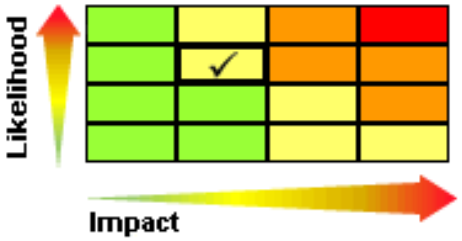
National Severe Weather Warning Service





Chief Forecasters Assessment
An active cold front will move southeast across the UK during Sunday, bringing some heavy rain to southwest facing hills in particular. The greatest impact is expected to be over parts of northwest England, notably Cumbria and north Lancashire, and the Yorkshire Dales, where 20-40 mm of rain is expected widely and locally 75 mm over the most prone upland areas of Cumbria exposed to the strong southwesterly wind.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **01:00 on Sun, 30th Sep 2012** until **17:00 on Sun, 30th Sep 2012**

Rain will become persistent and heavy across parts of northwest England and the Yorkshire Dales during Saturday night, lasting through Sunday morning, before clearing south later in the afternoon. The heaviest rain is likely to fall over southwest facing hills.

The rain will fall onto already saturated ground, so the public should be aware of the risk of localised flooding.
